# JURASSIC PARK

## WELCOME TO... JURASSIC PARK!

Humans waited 65 million years for cloning technology to be advanced enough to re-create dinosaurs from DNA found in mosquitoes preserved in amber. If that's the timeline, the 29 years between Jurassic Park, the first film in the franchise, and the latest Jurassic World: Dominion doesn't seem all that long. But spreading six movies out across three decades does make it easy to lose track of exactly what happens in one or two along the way.

# SERVICE WORKERS

<https://github.com/rowdyrabouw/offline-first.nl/tree/02-add-service-worker>

# Service Workers

- JavaScript file
- runs in the background in a separate thread; non-blocking
- scoped to a website
- can't modify page; no access to DOM
- asynchronous; promises or async/await
- event driven

# # Service Workers - CR

Usage % of all users ?

Global 94.29% + 0.09% = 94.38%

Method that enables applications to take advantage of persistent background processing, including hooks to enable bootstrapping of web applications while offline.

# THE LOST WORLD: JURASSIC PARK

## PLOT SYNOPSIS

The movie opens with an incident on the island of Isla Sorna (code-named "Site B" by the InGen company), located in the vicinity of Isla Nublar, where the film "Jurassic Park" took place.

# Prefetch

Prefetching is when content is downloaded in the background, this is based on the assumption that the content will likely be requested, enabling the content to load instantly if and when the user requests it.

The content is downloaded and cached for anticipated future use without the user making an explicit request for it.

```

# OPTIMISED PREFETCH

<https://github.com/rowdyrabout/offline-first.nl/tree/08-optimised-prefetch>

```
// get all links on the page  
const linkList = document.querySelectorAll("a");
```

# data-\*

The data-\* global attributes form a class of attributes called custom data attributes, that allow proprietary information to be exchanged between the HTML and its DOM representation by scripts.

```
<a data-skip-prefetch href="...">... </a>
```

```
// get all links on the page without data-skip-prefetch attribute  
const linkList = document.querySelectorAll("a:not([data-skip-prefetch])");
```

# Intersection Observer API

The Intersection Observer API provides a way to asynchronously observe changes in the intersection of a target element with an ancestor element or with a top-level document's viewport.

```
const observer = new IntersectionObserver(  
  (entries) => {  
    entries.forEach((entry) => {  
      // if the link is in the viewport  
      if (entry.intersectionRatio === 1) {  
  
          fetch(entry.target.href, { cache: "no-store" });  
  
      }  
    });  
  },  
  { threshold: 1 }  
);
```

```
const observer = new IntersectionObserver(
  (entries) => {
    entries.forEach((entry) => {
      // if the link is in the viewport
      if (entry.intersectionRatio === 1) {

        fetch(entry.target.href, { cache: "no-store" });

      }
    });
  },
  { threshold: 1 }
);

// get all links on the page without data-skip-prefetch attribute
const linkList = document.querySelectorAll("a:not([data-skip-prefetch])");
if (linkList) {
  linkList.forEach((link) => {
    observer.observe(link);
  });
}
```

```
const observer = new IntersectionObserver(
  (entries) => {
    entries.forEach((entry) => {
      // if the link is in the viewport
      if (entry.intersectionRatio === 1) {
        const isFetched = localStorage.getItem(entry.target.href);
        // if the link is not fetched yet
        if (!isFetched) {
          fetch(entry.target.href, { cache: "no-store" }).then(() => {
            // save link information
            localStorage.setItem(entry.target.href, entry.target.innerText);
          });
        }
      }
    });
  },
  { threshold: 1 }
);

// get all links on the page without data-skip-prefetch attribute
const linkList = document.querySelectorAll("a:not([data-skip-prefetch])");
if (linkList) {
  linkList.forEach((link) => {
    observer.observe(link);
  });
}
```
